

### ABSTRACT OF THE DISCLOSURE

An elastic belt formed of an elastic material endlessly in a cylinder has an inner surface and/or an outer surface thermally pressed and thus smoothed to provide an industrial elastic belt. Furthermore a method of producing an industrial elastic belt, including the step of thermally pressing an inner surface and/or an outer surface of an elastic belt formed of an elastic material endlessly in a cylinder. An industrial elastic belt having a surface enhanced in smoothness and a method of producing an industrial elastic belt that can help the belt to have a surface enhanced in smoothness, can thus be provided.
